# The Smart Contract, Centralized and Decentralized Applications Platform

Smart Contracts Applications?

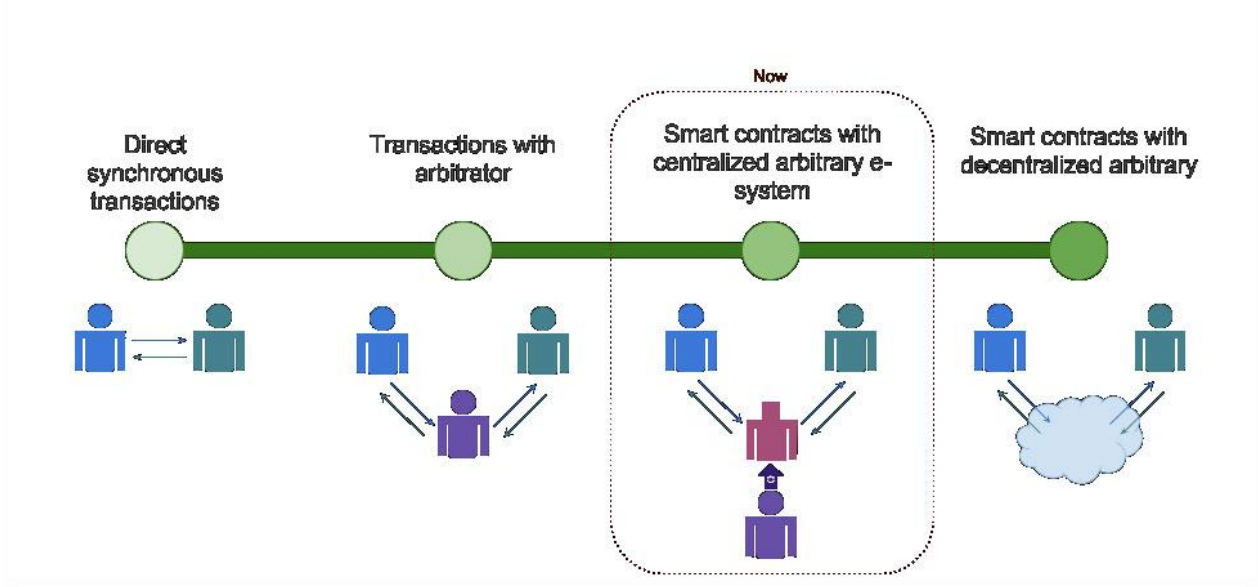

## Smart Contract Deployment

C-EXINS Blockchain department, Odeonus

Smart contract applications include financial purposes such as investing, borrowing, lending and trading. Healthcare, and real estate as well as gaming can be used in this kind of

applications; as well as more complex applications involving like having digital assets being directly controlled by a piece of code implementing arbitrary rules ("smart contracts") or even entire corporate structures can be used to configure even blockchain based centralized (CEX), decentralized (DEX) autonomous organizations (DAOs).

## **Ethereum blockchain**

A Decentralized blockchain platform that a peer-to-peer network establishes that securely executes and verifies application code is called smart contracts. Without a trusted central authority allow participants to transact with each other by the Smart contracts.

## **Binance**

Binance is a cryptocurrency exchange in which is the largest exchange in the world in terms of daily trading volume of cryptocurrencies.

# ERC20 Smart Contract

ERC-20 is the Smart contract on Ethereum. It is a standard for all smart contracts on the Ethereum blockchain for the token implementations.

ERC-20 token standard empowers developers of all types to accurately predict how new tokens will function within the larger Ethereum system, It defines a common list of rules that all fungible Ethereum tokens should adhere to. This simplifies and eases developers' tasks, because their usability provides to each and every new project the predefined functionality and rules.

## **What is Polygon smart contract?**

It is a Proof-of-stake blockchain, just like other PoS blockchains, with the exception that transactions are collected and then settled on the Ethereum blockchain. This gives Polygon the interoperability, liquidity, and security of Ethereum. Polygon's main chain is a Proof-of-Stake (PoS) sidechain.

# OdeMatic ODM

OdeMatic ODM is a decentralized blockchain application that is built on Polygon ERC20 Smart Contract.

# Vision

OdeMatic ODM is a member token of the Financial Support Project Module. This module is a member of an enterprise blockchain project; " **The Project VR** ".

OdeMatic ODM Polygon ERC20 Token is a member of crypto currency backup program of financial support module.

Habitant was designed due to the recent needs of P2P transactions solutions.

## **Life time of OdeMatic ODM Token**

The stability of OdeMatic ODM ERC20 token related to the strategy inspired by the trend of the financial markets. Due to the fake blockchain projects revolving in the market because of the fame of the crypto currencies of the market we decided to launch C-EXINS's own blockchain project to make investments stable and secure as well as which could be in the interest of the every market investors.

Smart Contract was the fastest way to bring C-EXINS's ideas into the reality. We chose the Polygon Smart Contract ERC20, a better solutions for our blockchain tradable crypto currency like bitcoin.

**OdeMatic ODM Trade with Pairs**

**MATIC/ODM, BTCB/ODM**

Created & owned by the C-EXINS Blockchain Department.

Launched on 15 of May, 2022. Built on Polygon Smart Chain Technology.

Successfully launched on swap exchange. Trading pairs are ( **MATIC/ODM, BTCB/ODM** ) on [Quickswap.exchange](https://www.quickswap.exchange) , Trade on other exchanges would be available in the coming days.

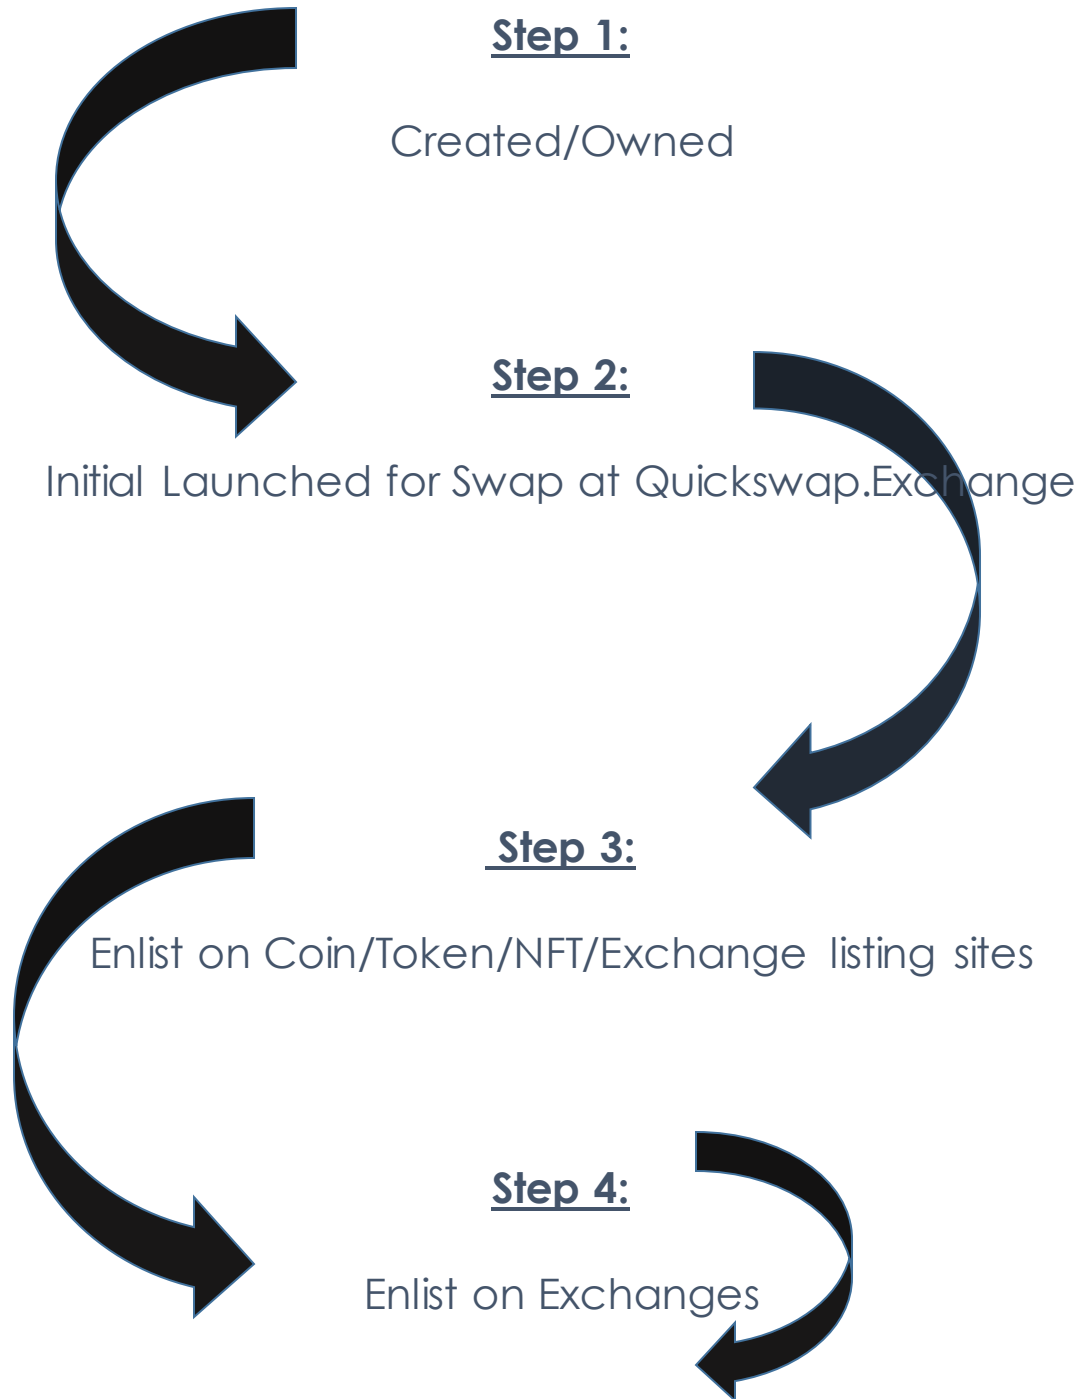

# OdeMatic ODM listed on Coins listing Markets

OdeMatic ODM is listed on several crypto currency price updates portals providing the 24/7 market capital ticking facilities.

## Roadmap & Timeline of the OdeMatic ODM project

**Step 5:**

Open for Trade

**Step 6:**

Get included into StableCoin to OdeMatic ODE

**Step 7:**

Design & developments for the OdeMatic ODE ecosystem

**Step 8:**

Create the market place (C-EXINS exchange) for OdeMatic

ODM

**Step 9:**

Payment Processor for easy payments

**Step 10:**

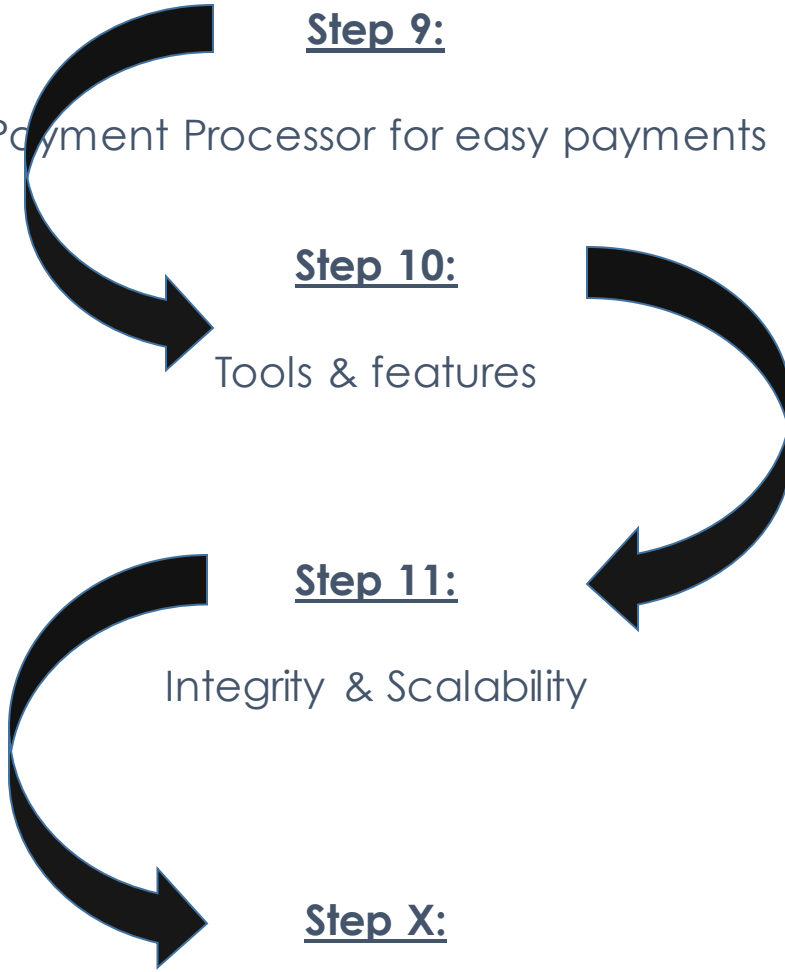

Tools & features

**Step 11:**

Integrity & Scalability

**Step X:**

Sustainability Calibration & Stability

OdeMatic ODM would be available for trade on exchanges right after the completion of required legal documentation “ **Legal opinion letter** “, where needed, to increase the trust and reliability of the OdeMatic ODM Polygon ERC20 Token. And for the accomplishment of the buy’s safety levels as well.
